TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, C, C++, Bash, SQL, NumPy, Pandas
Technologies: React.js, Next.js, Angular.js, React Native, Node.js, Express.js, Nest.js, FastAPI, Flask
AI/ML: PyTorch, LangChain, OpenRouter, Ollama, Multi-Agent Architecture, RAG, Prompt Engineering
Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase, Llama Index, ChromaDB
Tools: AWS, GCP, Docker, Terraform, Git, GitHub, Vercel, VS Code, Vim, Linux Command Line, OpenSSH

EXPERIENCE

- Devsinc** July 2025 – Present
Software Engineer Islamabad, PK
 - Led development of a dual-platform web and mobile ecosystem for a high-traffic US client, delivering a distributed JavaScript backend on AWS that maintained 99.9% uptime during a 400% surge in concurrent sessions.
 - Built a real-time data processing pipeline with Deno Edge Functions, OpenAI API, and Supabase Vector, cutting search relevance latency by 150ms.
 - Engineered a multi-agent MCP server, utilizing real-time context, resulting in a 35% improvement in response accuracy and enabling secure, tool-based execution.
- Devsinc** March 2025 – July 2025
Associate Software Engineer Islamabad, PK
 - Implemented advanced performance optimization techniques, including efficient state management with Redux and client-side data caching using TanStack Query, reducing load times by 44% and significantly improving UX.
 - Refactored database layers, utilizing advanced RLS policies, RPC functions, and query indexing strategies that reduced complex data retrieval times by 55% and eliminated 90% of database bottlenecks during peak periods.
 - Engineered and deployed a robust CI/CD pipeline from the ground up, integrating automated regression testing and containerized deployment workflows that accelerated the feature release cycle by 3x.
- Orbit-Ed** June 2024 – March 2025
MERN Stack Developer Islamabad, PK
 - Spearheaded the development of Orbit-Ed's Learning Management System (LMS) and AI-based 3D-web applications, facilitating VR-based enterprise training across multiple industries, serving over 1,000 users.
 - Engineered over 100 RESTful API endpoints, enabling seamless communication between the VR app, server-side AI models and web applications; consequently, improving data processing speed by 25%.
 - Enhanced frontend UI/UX and site performance, optimizing code and reducing page load times by 15%.

EDUCATION

- Ghulam Ishaq Khan Institute of Engineering Sciences and Technology (GIKI)** May 2024
Bachelor of Science in Computer Engineering (CGPA: 3.39 / 4.00) Topi (Swabi), PK
 - Relevant Coursework:** Full Stack Development, DevOps, Deep Learning, Intro to AI, Operating Systems, Intro to Databases, Data Structures and Algorithms, Computer Organization, Object Oriented Programming

PROJECTS

- NLP-Powered Business Intelligence** | *Final Year Project* | *Next.js, Flask, Python, PostgreSQL, Firebase*
 - The project aims to simplify the process of business intelligence reporting for non-technical users by leveraging natural language processing techniques and incorporating open-source large language models.
 - Developed a full-stack application that utilizes an LLM to interpret user queries, fetch required data, and generate data visualizations. The platform allows users to customize and save these charts to personalized dashboards.
- H.E.L.I.X. IoT-Based ChatBot** | *Group Project* | *Python, Rasa, Flask, HTML, CSS*
 - Built an IoT-based Chatbot featuring voice and text input functionality, enabling users to control devices. Implemented a user-friendly app and implemented voice recognition for identification, achieving 78% accuracy.
- University Complaint Portal** | *Group Project* | *PHP, HTML, CSS, MySQL*
 - Built a website, enabling 2000+ university residents to lodge and track their complaints and feedback.
